Product Description

Advantages

Our

- Excellent esthetics with natural translucency
- Exceptional strength and durability
- Versatile for various types of restorations
- Minimal tooth preparation, preserving natural tooth structure
- Biocompatible and well-tolerated by patients

Key Features

Esthetic Excellence: E.Max restorations are renowned for their lifelike and natural-looking aesthetics. The material closely mimics the translucency and color of natural teeth, creating seamless and beautiful smiles.

Exceptional Strength: Despite its superior esthetics, E.Max is a remarkably strong material. It can withstand the forces of chewing and grinding, ensuring long-lasting durability for both anterior and posterior restorations.

Versatility: E.Max offers versatility in treatment options, making it suitable for a wide range of restorations, including single crowns, veneers, inlays, and even full-arch reconstructions. It can be customized to meet specific patient needs.

Minimal Tooth Preparation: E.Max restorations often require minimal tooth preparation, preserving more of the natural tooth structure. This conservative approach helps maintain tooth integrity and promotes long-term oral health.

Biocompatibility: E.Max is biocompatible and well-tolerated by patients, minimizing the risk of adverse reactions or sensitivities.

Indications

- Single crowns
- Veneers
- Inlays and onlays
- Full-arch reconstructions (with proper case selection)

Considerations

- Proper shade selection and communication with the dental lab are crucial for achieving optimal esthetics.
- Case selection and clinical evaluation play a significant role in determining the suitability of E.Max for specific restorative needs.
